FOODER

QUICK REMINDER… WHAT'S OUR APP AGAIN?

Helps with our 21st generation question:
"What do you want to eat?" "I don't know"

▸ Tinder for food

▸ Swipe left for no, swipe right for yes

WHY FOODER?

▸ To create an easy and fun to use app that helps you randomly search for restaurants near you

▸ Not all apps are a necessity

   ▸ We don't want Fooder to be a **NEED** it should be a **WANT**

WHO ARE OUR COMPETITORS:

▸ Yelp and Tinder

▸ We are using the ideas of both and implementing them into our app

▸ Potentially any existing app with wants to implement food content

▸ **SOLUTION:**

 ▸ to get our app out to market first and gather the appeal of our audience while making a fun app

PROTOTYPE – CONCEPT ART

Bucket List

Chipotle Mexican Grill

CrabShack

Aunt Jamaima's

BlueBerry Stack Shack

FiveGuys Burgers and Fries

HOW ABOUT:

CHIPOTLE MEXICAN GRILL

Location
My Current Location, San Jose, CA

Maximum Distance
0 mi ——————————————— 100 mi

Minimum Stars
⭐⭐⭐☆☆

Price Guide
$$$$

FIRST DEMO

▸ **Completed prototype test case #1 - Post Condition:**

▸ **"Depending on user choice, if user swipes left or presses "x" the main page will refresh with a new restaurant image**

▸ **What did our first Demo accomplish?**
  ▸ **the swipe left and right function**
  ▸ **reject and heart button**
  ▸ **Stored 4 random restaurants**

Simple first glance of what we want the user to see

PROJECT RISKS & CHALLENGES

RISKS:

▸ Application bugs and crashes

▸ Hitting project milestones

　▸ **SOLUTIONS:** Frequent application testing, weekly meet ups, and constant team drive to finish application goals on time

CHALLENGES:

▸ Yelp API

▸ Google Login

YELP FUSION – CHALLENGE 1

‣ Steps we have taken so far:

  ‣ signed up with Yelp for App Access
  ‣ contained an Access Key

CHALLENGE:

‣ Implementing it into our App

CURRENTLY:

‣ Still in process of implementing

‣ using some data from yelp's website/dataset challenge

RISK MITIGATION:

‣ Back up plan of using Google Places if we cannot get into Yelp Fusion or worst case, using the yelp dataset challenge info

‣ Still test it out in postman

GOOGLE SIGN IN – CHALLENGE 2

CHALLENGE:

‣ Implementing it into our App with proper credentials from Google

CURRENTLY:

‣ Implemented into our second demo successfully

‣ Application has a sign in page while having the user sign into their google account

SECOND DEMO

What has been updated?

Restaurant list - still not yelp fusion, but has a small relevant list of restaurants in our area

Swipe Messages - lets you know whether or not you are accepting or rejecting

App Logo and Icon - created a Logo and App Icon for an official Fooder App "Face"

Login page - sign into google account

Maps Button - maps button will open Maps App

MINOR FIXES:

our buttons were mixed up before where the "X" would reject, but the heart would not accept, map button would accept restaurant - **RESOLVED**
